

Exam Code: 310-303

Exam Name: Sun Certified Security Administrator for the
Solaris 10 OS

Vendor: Sun

Version: DEMO

Part: A

1: A security administrator has a requirement to deploy the Solaris Security Toolkit onto all Solaris servers in the department. In this environment, there are a variety of platforms and operating system versions deployed. Onto which two platforms and operating system combinations can the Solaris Security Toolkit be deployed in a supported configuration? (Choose two.)

- A.x86, Solaris 2.4
- B.x64, Solaris 9
- C.x86, Solaris 10
- D.SPARC, Solaris 2.6
- E.SPARC, Solaris 8

Correct Answers: C E

2: The company security policy now requires very detailed auditing of all actions. This includes capturing all executed commands together with their arguments and the environment variables. After activating auditing on all Solaris 10 systems, the security auditor complains about having to check the audit trail on each individual host. He asks for a central place to capture all audit trails. Using standard Solaris 10 security features, which is a solution to this problem?

- A.Configure auditd to send email with the events.
- B.Configure auditd to send the output using syslog to a central loghost.
- C.Configure auditd to store the audit trail using NFS on a central server.
- D.Configure auditd to store the audit trail using LDAP in a central directory.

Correct Answers: C

3: Which two tasks does the Key Distribution Center (KDC) perform? (Choose two.)

- A.issues service tickets
- B.authenticates services
- C.issues ticket-granting-tickets
- D.validates passwords sent in clear text
- E.provides private sessions to services

Correct Answers: A C

4: Given:

jupiter:\$md5,rounds=2006\$2amXesSj5\$\$kCF48vfPsHDjlKNXeEw7V.:12210::::::

What is the characteristic of this /etc/shadow entry?

- A.User jupiter uses the md5 hash, with salt 2006\$2amXesSj5\$, and with the encrypted password \$kCF48vfPsHDjlKNXeEw7V.
- B.User jupiter uses the 2a hash, with 2006 iterations of the hash, with salt 2amXesSj5, and with the encrypted password kCF48vfPsHDjlKNXeEw7V.
- C.User jupiter uses the md5 hash, with 2006 iterations of the hash, with salt 2amXesSj5, and with the encrypted password kCF48vfPsHDjlKNXeEw7V.
- D.User jupiter uses the md5 hash, with 2006 iterations of the hash, with no salt, and with the encrypted password \$rQmXesSj5\$\$kCF48vfPsHDjlKNXeEw7V.

Correct Answers: C

5: A security administrator is required to validate the integrity of a set of operating system files on a number of Solaris systems. The administrator decides to use the Solaris Fingerprint Database to validate configuration and data files as well as binaries and libraries. What command, available by default in Solaris 10, will help the security administrator collect the necessary information that will be used with the Solaris Fingerprint Database?

- A.md5sum
- B.digest
- C.encrypt
- D.elfsign
- E.cryptoadm

Correct Answers: B

6: You are configuring a new system to be used as an intranet web server. After you have installed the minimal amount of packages and patched the system, you added the appropriate web server packages (SUNWapch2r and SUNWapch2u). By default, the web server daemon will be started using UID webserverd and the basic privilege set. To comply with the company's policy of least privilege, you need to minimize the privileges that the web server will have. What will you modify to specify the privileges that the web service will run with?

- A.the PRIV_DEFAULT setting in /etc/security/policy.conf
- B.the defaultpriv setting of webserverd in /etc/user_attr
- C.the privileges property of the web service in the SMF repository
- D.the privs property of the web service in /etc/security/exec_attr

Correct Answers: C

7: After a recent audit, you have been requested to minimize an existing Solaris system which runs a third party database application. Which two should you do before starting to minimize the system? (Choose two.)

- A.Back up the system.
- B.Remove any unneeded patches.
- C.Install the SUNWrnet metacluster.
- D.Remove any unneeded packages.
- E.Confirm with the vendor of the database software that they support minimization.

Correct Answers: A E

8: Click the Exhibit button.

You maintain a minimized and hardened web server. The exhibit shows the current credentials that the web server runs with. You receive a complaint about the fact that a newly installed web-based application does not function. This application is based on a /bin/ksh cgi-bin script.

What setting prevents this cgi-bin program from working?

```
# ps -fp 734
      UID  PID PPID  C  STIME   TTY  TIME CMD
webservd 734   1    0 00:26:43 ?    0:00
/usr/apache2/bin/httpd -k start

# pcred 734
734:   e/r/suid=80  e/r/sgid=80

# ppriv -S 734
734: /usr/apache2/bin/httpd -k start
flags = <none>
E: net_privaddr,proc_fork
I: net_privaddr,proc_fork
P: net_privaddr,proc_fork
L: zone
```

- A. The system might NOT have /bin/ksh installed.
- B. The server is NOT allowed to call the exec system call.
- C. The server should run with uid=0 to run cgi-bin scripts.
- D. Some of the libraries needed by /bin/ksh are NOT present in the webserver's chroot environment.

Correct Answers: B

9: One of the operators of the mainframe group was moved to the UNIX group and tasked to activate and configure password history. For every user, the last 10 passwords should be remembered in the history. In what file is the size of the password history configured?

- A. /etc/shadow
- B. /etc/pam.conf
- C. /etc/default/passwd
- D. /etc/security/policy.conf

Correct Answers: C

10: Within the context of file integrity, rules can be implemented to change the scope of the Basic Audit and Report Tool (BART) manifest.

Given the rule file:

/home/bert/docs *.og[dt]

CHECK all

IGNORE mtime

Which two statements are valid? (Choose two.)

- A. All files on the system will be checked.
- B. The last modification time of all checked files will not be checked.
- C. Key words such as CHECK and IGNORE can NOT be used in a rule file.
- D. Only files with extension .ogt and .ogd in the directory /home/bert/docs will be checked.
- E. All files on the system will be checked, except for files with extensions .ogt and .ogd in the directory /home/bert/docs.

Correct Answers: B D

11: Solaris Auditing supports the selective logging of which two kinds of events? (Choose two.)

- A. file access by selected users

- B.access to selected files by all users
- C.selected users making outbound network connections
- D.password changes which do not meet the system password policy

Correct Answers: A C

12: A security administrator creates a directory called prevoy with the following access control policy:

```
$ getfacl prevoy
# file: prevoy
# owner: secadm
# group: secadm
user::rwx group::r-x          #effective:r-x
mask:r-x
other:r-x
default:user::r--
default:user:sysadm:rw-
default:group::r--
default:group:sysadm:rw-
default:mask:rwX
default:other:---
```

Into this directory, the security administrator creates a file called secrets. The ls command reports the following for the prevoy directory and secrets file:

```
$ ls -ld . secrets
drwxr-xr-x+  2 secadm secadm    512 Jun  6 16:38 .
-r--r-----+ 1 secadm secadm      0 Jun  6 16:38 secrets
```

Which two actions can be successfully taken by the sysadm role? (Choose two.)

- A.The sysadm role can read the secrets file.
- B.The sysadm role can write to the secrets file.
- C.The sysadm role can remove the secrets file.
- D.The sysadm role can create new files under the prevoy directory.
- E.The sysadm role can change the Access Control Lists of the prevoy directory.

Correct Answers: A B

13: The /etc/default/passwd file contains a number of configuration parameters that can be used to constrain the character composition of user passwords. What is one of the dangers of having password composition too tightly constrained?

- A.Password complexity rules apply only to the English alphabet.
- B.The entropy of the resulting password strings will be very high.
- C.Duplication of encrypted user password strings is much more likely.
- D.Limited password value possibilities can simplify brute force attacks.
- E.Passwords are harder to compute when using many character classes.

Correct Answers: D

14: Which two commands are part of Sun Update Connection? (Choose two.)

- A./usr/bin/pkgadm
- B./usr/bin/keytool
- C./usr/sbin/smpatch
- D./usr/sbin/patchadd
- E./usr/bin/updatesmanager

Correct Answers: C E

15: To harden a newly installed Solaris OS, an administrator is required to make sure that syslogd is configured to NOT accept messages from the network. Which supported method can be used to configure syslogd like this?

- A.Run svcadm disable -t svc:/network/system-log.
- B.Edit /etc/default/syslogd to set LOG_FROM_REMOTE=NO.
- C.Edit /etc/rc2.d/S74syslog to start syslogd with the -t option.
- D.Edit /lib/svc/method/system-log to set LOG_FROM_REMOTE=NO.

Correct Answers: B
