Vendor: VMware

Exam Code: VCPC610

Exam Name: VMware Certified Professional 6 - Cloud

Version: DEMO

QUESTION 1
An administrator powers on a vCloud Automation Center Multi-Machine Service that includes Machine A and Machine B. The application on Machine A does not start correctly and displays the following error message:

```
Machine B not ready
```

What step should be taken to resolve this issue?

A. Change the startup order of the Multi-Machine Service.
B. Create a startup dependency in the Multi-Machine Service.
C. Define a startup delay in the Multi-Machine Service.
D. Adjust the startup approvals for the Multi-Machine Service.

Answer: A

QUESTION 2
A vSphere administrator needs to increase the capacity of an existing Storage Distributed Resource Scheduler (SDRS) datastore cluster.
The storage administrator has provisioned two new NFS datastores to be added to the cluster.
The vSphere administrator receives an error message, preventing the administrator from adding the newly provisioned datastores to the cluster.
What is the likely reason that the action failed?

A. There are virtual machines running on the datastores being added to the cluster.
B. The datastores in the SDRS cluster are VMFS datastores.
C. The datastores in the existing cluster have hardware acceleration enabled and the new datastores do not.
D. The SDRS cluster has not been placed into maintenance mode.

Answer: B

QUESTION 3
A vSphere administrator creates a new vSphere Distributed Switch. The administrator receives notice from the service desk that a cluster of vSphere hosts has disconnected from vCenter Server. This disconnect occurred immediately after the new switch was created.

```
- This vSphere Distributed Switch is the only distributed switch
managed by vCenter Server.
- The virtual machines are still functional and the applications are
still accessible by end users.
```

On the ESXi hosts, which step must the vSphere administrator take to allow vCenter Server to reconnect?

A. Use the Direct Console User Interface to reattach the management vmnic to the appropriate switch
B. Use the Direct Console User Interface to disable lockdown mode on each affected host
C. Use the ESXi Shell to restart the mgmt-vmware service on each affected host
D. Use the ESXi Shell to restart the vSphere Web Client service on each affected host

Answer: A

QUESTION 4
Immediately after installing an ESXi host, an administrator needs to examine the following log files:

```
– /var/log/hostd.log
– /var/log/vmkernel.log
– /var/log/vpxa.log
```

Which two techniques could an administrator use to examine these files? (Choose two.)

A. Using the Direct Console User Interface
B. Attaching a vSphere Client directly to the ESXi host
C. Attaching the vSphere Web Client directly to the ESXi host
D. Attaching the vSphere Client to the vCenter Server

Answer: AB

QUESTION 5
A vSphere administrator has configured a virtual machine alarm to trigger a warning when the condition Snapshot Size exceeds 1GB.
Which action should the administrator configure on the alarm to automatically resolve the condition?

A. Delete Snapshot
B. Reset VM
C. Run a Command
D. Consolidate Snapshot

Answer: C

QUESTION 6
Which configuration will block communication between two virtual machines on the same DMZ network?

A. An isolated Private VLAN configured on a distributed switch and the two DMZ server virtual machines connected to the same port group
B. Two different port groups created on a distributed switch and 1 DMZ server virtual machine connected to each port group
C. Two different port groups created on a standard switch and 1 DMZ server virtual machine connected to each port group
D. The security policy exception set to Reject for the switch to which the two DMZ server virtual machines will be connected

Answer: A

QUESTION 7
An administrator needs to migrate a virtual machine from one datastore to another, but the virtual machine has a snapshot. The virtual machine is running on an ESXi 5.x host.
Which action must the vSphere administrator take to ensure that the snapshot data remains

intact?

A. Perform a standard Storage vMotion migration.
B. Consolidate the snapshot and then perform a Storage vMotion migration.
C. Perform a Storage vMotion migration and then copy the snapshot file to the new location.
D. Delete the snapshot and then perform the Storage vMotion migration.

Answer: A

QUESTION 8
When a vSphere administrator attempts to remediate a host with Update Manager, the host is unable to enter maintenance mode.
Which condition is likely preventing the host from entering maintenance mode?

A. A virtual machine on the host has a removable device connected.
B. A virtual machine on the host is configured to use Fault Tolerance.
C. A virtual machine is powered off and cannot be migrated to another host.
D. A virtual machine is configured with a local .vswp file.

Answer: A

QUESTION 9
An application team is implementing a new solution in a vSphere environment. The vendor states the application is memory intensive.
The application is very unstable when operating without adequate on-demand access to physical memory. The application's virtual machines have been assigned to the Mission Critical resource pool.
Which resource pool setting will help ensure the application has adequate access to memory?

A. Memory reservation
B. High memory share value
C. Unlimited memory
D. Expandable reservation

Answer: A

QUESTION 10
A vCloud Automation Center administrator configures a virtual machine blueprint with a maximum storage capacity of 50 GB. The virtual machine attached to that blueprint is provisioned with 15 GB of storage.
What happens when the virtual machine is deployed using the default settings?

A. The virtual machine is deployed with 15 GB of storage.
B. The virtual machine is not deployed.
C. The virtual machine disk is deployed with 50 GB of storage.
D. The user is prompted to reconfigure the virtual machine's storage.

Answer: A

QUESTION 11
A user needs to modify the threshold value of the Fault badge within vCenter Operations Manager. What should the administrator do to enable the user to complete this operation?

A. Add the vCenter Operations Manager Admin privilege on the user in vCenter Server.
B. Modify the user's rights from the Access Rights tab.
C. Modify the group's rights from the Account tab.
D. Add the Adjust Badge Thresholds privilege on the user in vCenter Server.

Answer: A

QUESTION 12
An administrator needs to change the network a virtual machine will attach to. The virtual machine is deployed using vCloud Automation Center, but when the administrator attempts to modify the configuration, the requested network is not displayed.
Why is the network unavailable in the interface?

A. It is unavailable in the Provisioning Group.
B. It is unavailable in the Reservation.
C. It is unavailable in the Blueprint.
D. It is unavailable in the Build Profile.

Answer: B

QUESTION 13
An administrator deploys vCenter Operations Manager for an environment consisting of 5,200 virtual machines. The appliance begins collecting data from the environment.
A week after deployment, when the administrator tries to connect to the user interface, a 404 error is displayed.
What is the most probable cause for the error?

A. The UI virtual machine is out of memory.
B. The UI virtual machine is out of disk space.
C. The Analytics virtual machine is out of memory.
D. The Analytics virtual machine is out of disk space.

Answer: D

Thank You for Trying Our Product

PassLeader Certification Exam Features:

★ More than 99,900 Satisfied Customers Worldwide.

★ Average 99.9% Success Rate.

★ Free Update to match latest and real exam scenarios.

★ Instant Download Access! No Setup required.

★ Questions & Answers are downloadable in PDF format and VCE test engine format.

★ Multi-Platform capabilities - Windows, Laptop, Mac, Android, iPhone, iPod, iPad.

★ 100% Guaranteed Success or 100% Money Back Guarantee.

★ Fast, helpful support 24x7.
