

Exam Code: 1Y0-456

Exam Name: Access Suite 4.0 : Build/Test

Vendor: Citrix

Version: DEMO

Part:

1: Simulation Exhibit:

Certkiller.com users access resources using a variety of client devices, some clinic-owned and some personal. A number of applications in the current environment are not running correctly on certain types of client devices, causing a steady increase in support calls to the Help Desk. The Clinic CIO wants to limit the client devices that can be used to access resources. Because only client devices that can support all of the currently installed applications are members of the CertkillerAC domain, limiting access to only domain-member devices should solve the problem.

You are requested to create a scan named "CertkillerAC Domain" that does the following:

- * Ensures only client devices which are members of the CertkillerAC domain can be used to access resources.
- * Runs for the AllUsers logon point.
- * Runs against all client devices regardless of the operating system being used on the client device.

Correct Answers: 1. Create Endpoint Analysis / Machine Identification Scans / Citrix Scans for Domain Membership
