Exam Name: Microsoft Dynamics AX 2009 Installation and Configuration

Version: DEMO

QUESTION 1
An installer needs to install multiple application instances.
How is this done in Microsoft Dynamics AX 2009?

A. The instances can be installed on the same machine, but the installer must provide a
    separate root directory for each application.
B. The installer supplies an application instance name for each instance.
    Then, all applications are installed in the same root folder.
C. There cannot be multiple Application instances on the same server.
D. The installer will need to create a separate logical drive for each application instance.

Answer: B

QUESTION 2
Which accounts should have permissions to the application file folder? Choose the 2 that apply.

A. All clients.
B. Application Object Server service.
C. Windows administrators.
D. Database server service.

Answer: BC

QUESTION 3
An installer is getting ready to install the developer components of a Microsoft Dynamics AX 2009
implementation.
What SQL Server permissions are required to install the Microsoft Dynamics database in the
Microsoft SQL Server instance?

A. DBOwner role
B. SecuirtyAdmin role
C. DBCreator role
D. SetupAdmin role

Answer: C

QUESTION 4
An implementer is in the planning phases of a Microsoft Dynamics AX installation. He or she
discovers that the company will have users outside of their domain who need access to the
system. Which topologies might be options for this installation? Choose the 2 that apply.

A. Intranet-Only Enterprise Portal.
B. Standard Perimeter Network.
C. Clustered Base Topology.
D. Traditional Perimeter Network.

Answer: BD

QUESTION 5

In a 64-bit implementation, which statement is true about the .NET business connector?

A. The 32-bit .Net Business connector is installed because there is no 64-bit .NET business connector.
B. The 64-bit .NET Business Connector is installed.
C. Both the 32-bit and 64-bit .NET business connector are installed in the same path.
D. Both the 32-bit and 64-bit .NET business connector are installed, but they must reside in different paths.

Answer: D

QUESTION 6
Microsoft Dynamics AX 2009 is being implemented with multiple Application Object Servers and multiple clients.
What is Microsoft's recommended database strategy for this type of implementation?

A. Install the database server on each Application Object Server.
B. Have one database server corresponding to each Application Object Server.
C. Install a dedicated database server.
D. Install a clustered database server.

Answer: C

QUESTION 7
The total number of transactions per hour affects the database system needs when planning for appropriate system hardware needs. How is the number of transactions defined for purchase orders?

A. Each purchase order is considered one transaction.
B. Each purchase order line is considered one transaction.
C. Each purchase order grouped by customer is considered a transaction.
D. Purchase orders transactions cannot be used to calculate database capacity. Use sales orders instead.

Answer: B

QUESTION 8
An implementer is creating three different environments. One is for development, one is for testing and one is for production.
What is the recommended setup for databases and application files?

A. One database and three application file locations because each environment can share the same data.
B. Three databases and three application file locations because each environment needs its own database and application files.
C. Three databases and one application file location because each environment can share the application files but needs a separate database.
D. Both B and C are correct.

Answer: B

QUESTION 9
When installing Microsoft Dynamics AX 2009 using an Microsoft SQL Server database server, what is the correct database setup option? Choose the 2 that apply.

A. Specify a SQL script to generate the database.
B. Create a SQL Server database.
C. Use one of the provided database templates.
D. Connect to an existing SQL Server database.

Answer: BD

QUESTION 10
