B. Cold, the file has been changed to the file needs to be stored again
C. Warm, all the data has been seen by the Steelhead appliances before
D. Warm, the transaction prediction module of the Steelhead appliance can detect the application and accelerate the transfer
E. Partially warm, the Steelhead appliances only need to learn the new data

Answer: E

QUESTION 4
A user uploads a Microsoft Word document to a server across the network using the file transfer protocol (FTP). The file has been seen before by the Steelhead appliances that are optimizing the link and so the user experiences warm performance. A second user at the same location downloads the file from the same server using the CIFS protocol. This file transfer can be considered:

A. Cold, the data now travels in another direction so the Steelhead appliances need to relearn the data
B. Cold, the application protocol is now different so the Steelhead appliances need to relearn the data
C. Warm, the data has been seen by the Steelhead appliances before making the application protocol irrelevant
