Vendor: IBM

Exam Code: C2040-917

Exam Name: Administering IBM Connections 3.0

Version: DEMO

QUESTION 1
Patrick has defined an IBM HTTP Server and mapped his installed features to it. However, he still sees that the port numbers are in the URL when he uses a link from the navigation bar. What is the most likely reason this is happening?

A. The host alias has not been defined for his features.
B. The feature's port numbers have not been removed from the serverindex.xml file.
C. The feature's port numbers must be removed from the IBM HTTP Servers httpd.conf file.
D. The feature's port numbers have not been removed from the LotusConnections-config.xml file.

Answer: D

QUESTION 2
Judy wrote an audit tool that plugs into Connections using the Event SPI. How is an Event SPI implementation deployed?

A. The extension is a stand-alone JAR file that must be added to every EAR file. This process can be manually copied to the EAR or deployed using the WebSphere Application Server admininstrative application update tools.
B. Judy must create a WAR file that must then be deployed to every EAR file that you want to audit.
The LotusConnections-config.xml file must be updated by adding a new service entry.
C. The extension must be included in an EAR file and deployed to an existing or new cluster.
The LotusConnections-config.xml file must be updated by adding a new service entry.
D. The extension is deployed as a WebSphere Application Server shared library.

Answer: D

QUESTION 3
Juan is preparing Tivoli Directory Integrator to populate and maintain Profiles records, and he must configure the environment so that the Connections and Tivoli Directory Integrator solution tasks can connect to the database hosting the Profiles database. How does he configure the database drivers so that they are available to the solution?

A. He copies the database JDBC drivers to the jvm/jre/lib/ext subdirectory of the Tivoli Directory Integrator installation.
B. No driver configuration is necessary, because all database connections are managed by the database client software.
C. He updates the Tivoli Directory Integrator solution's profiles_tdi.properties file, and sets the dbrepos_jdbc_driver property to a local directory path containing the database JDBC drivers.
D. He updates the ibmdisrv file in the Tivoli Directory Integrator installation directory and adds a the local directory path containing the database JDBC drivers using the "-driverpath" parameter on the Java invocation command.

Answer: D

QUESTION 4
Bob needs to configure federated repositories using LDAP over SSL. Identify which of the following tasks is not required to enable SSL communication over LDAP?

A. Change the port number to the SSL port of the LDAP server.

B. Select the SSL alias defined by Bob in the trust store in the federated repositories configuration.
C. Add a signer certificate to the trust store in WebSphere Application Server by retrieving the certificate from the LDAP port.
D. Generate a self-signed certificate with an alias using the ikey manager utility and add it to the Websphere Application Server certificate store.

Answer: D

QUESTION 5
Joe has installed and enabled the mobile feature. He has been using the self-signed SSL certificate produced by WebSphere Application Server, rather than having a trusted certificate. What must he do to allow iPhone and iPod Touch users to access secure pages from their devices without receiving warnings about the untrusted certificate?

A. The mobile feature does not support authenticated access or HTTPS communication.
B. The mobile feature does not support authenticated access or HTTPS communication.
C. Nothing. The iPhone and iPod Touch devices automatically trust the self-signed certificate and allow the user to access Connections information without warnings being shown.
D. Send an email to his users with the certificate as an attachment, ask them to open the attachment from the device. When they do, the device recognizes it, and installs the certificate.

Answer: D

QUESTION 6
Baxter just installed the Search application on multiple nodes. What configuration does Baxter need to perform to initialize the search index on all nodes?

A. Set SEARCH_INDEX_DIR on all nodes to the same network share
B. Copy the search index to the same place on each node
C. Build the search index on each node
D. Nothing; the index is automatically created across all the nodes

Answer: B
