QUESTION 4

You have a deployment of Microsoft System Center 2012 R2 Configuration Manager. All client computers have the Configuration Manager client installed. You have two collections. One collection contains all of the client computers that connect to the

network remotely by using a VPN connection. The other collection contains all of the servers. You have a server named WSUS1 that has the Windows Server Update Services (WSUS) server role installed. WSUS1 and Configuration Manager are integrated.

You need to deploy update types to meet the following requirements:

- VPN clients require all update types except definition updates.
- Servers require all update types except update rollups.
- Updates must be installed without user intervention.
- Administrative effort must be minimized.

What should you create?

- A. two configuration baselines
- B. two distribution points
- C. two automatic deployment rules
- D. two software update points

Answer: C

QUESTION 5

You have a deployment of Microsoft System Center 2012 R2 Configuration Manager and System Center Updates Publisher 2011.

You plan to deploy updates to Adobe Reader version 11.

You need to ensure that the metadata for the Adobe Reader updates is downloaded locally to the Updates Publisher server.

Which two actions should you perform? Each correct answer presents part of the solution.

- A. Create a new publication.
- B. Run the Add Software Update Catalog wizard.
- C. Modify the Update Server options.
- D. Add a catalog.
- E. Create a rule.
- F. Modify the Trusted Publishers options.

Answer: AB

QUESTION 6

Your network contains one Active Directory domain. The domain contains a deployment of Microsoft System Center 2012 R2 Configuration Manager.

You need to update the Configuration Manager catalog from the information in System Center Online.

Which site system role should you add?

- A. Application Catalog web service point
- B. Asset intelligence synchronization point

QUESTION 7

Hotspot Question

You have a deployment of Microsoft System Center 2012 R2 Configuration Manager.

All client computers have the Configuration Manager client installed.

You deploy two applications named App1 and App2. App1 is a large application that is used infrequently.

Some users receive notifications indicating low disk space on their client computer.

You need to uninstall App1 from any client computer that has both App1 and App2 installed and that has less than 1GB of free disk space.

What should you do? To answer, select the appropriate options in the answer area.

Answer Area

Identify computers by:

Creating a configuration item.
Creating a software category.
Creating a software metering rule.
Creating a device collection that uses a query rule.
Creating a user data and profiles configuration item.

Remediation plan:

Retire App1.
Create a deployment for App1.
Create an automatic deployment rule.
Create and deploy an App-V package for App1.

QUESTION 8

You have a deployment of Microsoft System Center 2012 R2 Configuration Manager that was migrated from Configuration Manager 2007 R2.

You have a Windows Installer (MSI) package for an application named App1. App1 is deployed to several client computers by using Configuration Manager 2007 R2.

You plan to create a configuration item to modify a registry entry that was created during the installation of App1.

You need to identify which detection method must be used for the configuration item.

What is the best detection method to identify? More than one answer choice may achieve the

goal. Select the BEST answer.

- A. Use Windows Installer detection.
- B. Always assume application is installed.
- C. Use a custom script to detect this application,
- D. Detect a specific application and deployment type.

Answer: A

QUESTION 9

You deploy the Endpoint Protection client in Microsoft System Center 2012 R2 Configuration Manager to all client computers.

You plan to deploy an antimalware policy to the users in the research department.

You need to ensure that the research department users can exclude some processes from the Endpoint Protection client manually.

Which settings should you modify in the antimalware policy?

- A. real-time protection
- B. default actions
- C. threat overrides
- D. advanced
