In this scenario, which data type should you use?

- A. list
- B. tuple
- C. dictionary
- D. set

Answer: A

Explanation:

https://www.w3schools.com/python/python_lists.asp

QUESTION 2

Which statement is correct about Ansible? (Choose two.)

- A. Ansible core modules for the Junos OS are developed by Ansible developers
- B. Ansible Galaxy modules for the Junos OS are developed by Juniper Networks developers
- C. Ansible Galaxy modules for the Junos OS and Ansible core modules for the Junos OS can coexist on the same control machine
- D. Ansible Galaxy modules for the Junos OS and Ansible core modules for the Junos OS cannot coexist on the same control machine

Answer: BC

QUESTION 3

Which statement is correct about Python variables once they are created?

- A. A global variable can only be used by functions that are defined later
- B. All variables in Python can be used by any function within the script
- C. A global variable can be used by any function within the script
- D. A global can only be used within the function that created it

Answer: C

Explanation:

http://net-informations.com/python/iq/global.htm

QUESTION 4

Which two statements are correct about XML? (Choose two.)

- A. XML is used to send an event notification to a client
- B. XML is used to issue Junos operational commands
- C. XML is used to view or modify a Junos configuration
- D. XML is used to create a communications session to a remote device

Answer: BC Explanation: XML API uses:

Issue operational mode commands & Change the device configuration.

QUESTION 5

Which statement is true about YAML?

- A. YAML is a Unicode-based serialization language designed around common data types
- B. YAML is designed around parsing speed over human readability
- C. YAML is widely used on the Internet as a method to mode data between webservers and AJAX clients on Web browsers
- D. YAML follows the lowest common denominator data types and requires simple processing between different programming environments

Answer: A

Explanation:

http://yaml.org/spec/spec.pdf

QUESTION 6

Which statement is true about using Ansible a Junos device?

- A. The Junos device does not have an Ansible agent installed
- B. SFTP must be used to allow communication between the Ansible control server and the Junos device
- C. An Ansible playbook is a set of tasks written in XML
- D. Ansible modules are copied and executed on the Junos device

Answer: A

Explanation:

Because the majority of network devices can not run Python, the Ansible network modules are executed on the Ansible control node.
