Version: DEMO

QUESTION 1
Which of the following does not belong to Layer 2 VPN?

A. L2F
B. PPTP
C. L2TP
D. IPsec

Answer: D

QUESTION 2
When deploying dual-machine hot backup on the firewall, which of the following protocols needs to be used to achieve overall status switching of the VRRP backup group?

A. VRRP
B. VGMP
C. HRP
D. OSPF

Answer: B

QUESTION 3
In inter-domain packet filtering, which of the following applies to the Inboud direction?

A. Untrust>Trust
B. Local>Trust
C. DME>Untrust
D. Local>DNZ

Answer: A

QUESTION 4
Which of the following statements is correct regarding IPsec SA?

A. IPsec SA is one-way
B. IPsec SA is bidirectional
C. Used to generate encryption keys
D. Used to generate secret algorithms

Answer: A

QUESTION 5
After enabling the GRE keepalive function, by default, the device will periodically send keepalive messages to the peer every how many seconds?

A. 20
B. 10
C. 5
D. 3

Answer: C

QUESTION 6
Regarding the description of the preemption function of VGMP management, which of the following is incorrect?

A. By default, the preemption function of the VGMP management group is enabled.
B. By default, the preemption delay time of the VGMP management group is 40s.
C. Preemption means that when the original failed master device recovers, its priority will be restored. At this time, its status can be preempted as the master again.
D. When the VRRP backup group is added to the VGMP management group, the original preemption function on the VRRP backup group becomes invalid.

Answer: B

QUESTION 7
In the USG series firewall, you can use which of the following function to provide well-known application services for non-well-known ports?

A. Port mapping
B. MAC and IP address binding
C. Packet filtering
D. Long connection

Answer: A

QUESTION 8
Regarding the anti-virus response method of the firewall gateway for the HTTP protocol, which of the following statements is incorrect?

A. When the gateway device blocks the HTTP connection, it pushes the web page to the client and generates logs.
B. Response methods include announcement and blocking
C. In the alarm mode, the device only generates logs and sends them out without processing the files transmitted by the HTTP protocol.
D. Blocking means that the device disconnects from the HTTP server and blocks file transfers

Answer: B

QUESTION 9
Which of the following options is not a hashing algorithm?

A. MD5
B. SHA1
C. SM1
D. SHA2

Answer: C

QUESTION 10
Which of the following protocols cannot be encrypted by SSL VPN?

A. HTTP
B. UDP
C. IP
D. PPP

Answer: D

QUESTION 11
The intrusion prevention system is based on which of the following for attack identification?

A. Port number
B. Agreement
C. IP address
D. Feature library

Answer: D

QUESTION 12
Which of the following statements about VPNs is false?

A. Virtual private networks are less expensive than dedicated lines
B. VPN technology must involve encryption technology
C. VPN technology is a technology that multiplexes logical channels on actual physical lines.
D. The emergence of VPN technology allows employees on business trips to remotely access internal corporate servers

Answer: B

QUESTION 13
Which of the following technologies can hide the internal network of a private network while preventing external attacks on internal servers?

A. IP spoofing
B. NAT _
C. VRRP
D. Address filtering

Answer: B

QUESTION 14
Regarding Internet user management, which of the following is incorrect?

A. Each user group can include multiple users and user groups
B. Each user group can belong to multiple parent user groups

C. The system has a default user group by default, which is also the system's default authentication domain.
D. Each user belongs to at least one user group and can also belong to multiple user groups.

Answer: B

QUESTION 15
Which of the following does not include the steps of the security assessment method?

A. Manual audit
B. Penetration testing
C. Questionnaire survey
D. Data analysis

Answer: D

QUESTION 16
Regarding the description of an intrusion detection system, which of the following is incorrect?

A. The intrusion detection system can dynamically collect a large amount of key information through the network and computer, and can analyze and judge the current status of the entire system environment in a timely manner.
B. Once the intrusion detection system discovers behavior that violates security policies or there are traces of the system being attacked, it can implement blocking operations.
C. Intrusion detection system includes all software and hardware systems used for intrusion detection
D. The intrusion detection system can be linked with firewalls and switches to become a powerful "assistant" of the firewall to better and more accurately control traffic access between domains.

Answer: B

QUESTION 17
Regarding security policy configuration commands, which of the following is correct?

A. It is forbidden to access the ICMP packets from the trust zone to the untrust zone and the destination address is the 10.1.10.10 host.
B. Prohibit access from the trust zone to all host ICMP messages in the untrust zone with the destination address 10.1.0.0/16 network segment
C. Forbid all host ICMP messages from the trust zone to access the untrust zone and whose source address is the 10.1.0.0/16 network segment.
D. Prohibit access from the trust zone to all host ICMP messages from the untrust zone with the source address 10.2.10.10.

Answer: C

Thank You for Trying Our Product

Passleader Certification Exam Features:

★ More than **99,900** Satisfied Customers Worldwide.

★ Average **99.9%** Success Rate.

★ **Free Update** to match latest and real exam scenarios.

★ **Instant Download** Access! No Setup required.

★ Questions & Answers are downloadable in **PDF** format and **VCE** test engine format.

★ Multi-Platform capabilities - **Windows, Laptop, Mac, Android, iPhone, iPod, iPad**.

★ **100%** Guaranteed Success or **100%** Money Back Guarantee.

★ **Fast**, helpful support **24x7**.
