Vendor: Check Point

Exam Code: 156-215.82

Exam Name: Check Point Certified Security Administrator - R82

Version: DEMO

QUESTION 1
Which tool provides a graphical interface for centralized management of the Check Point Security environment?

A. Gaia Portal
B. Security Management Server
C. SmartConsole
D. SmartEvent

Answer: C
Explanation:
SmartConsole is the graphical management tool used to centrally configure, manage, and monitor the Check Point Security environment from a single interface.

QUESTION 2
One of the key component of the Three-Tier Architecture of Check Point R82 is:

A. SmartDashboard
B. SmartProvisioning
C. SmartUpdate
D. SmartConsole

Answer: D
Explanation:
SmartConsole is a core component of the Check Point R82 Three-Tier Architecture, providing the unified graphical interface used to manage policies, objects, logs, and security configuration across the environment.

QUESTION 3
What is the primary purpose of SecureXL?

A. Provides software-based solution for Security Gateway performance
B. Encrypts and decrypts traffic to and from Security Gateways
C. Protect sensitive data from being lost, stolen, or accessed by unauthorized users
D. Identifies and controls sensitive data within network

Answer: A
Explanation:
SecureXL is designed to accelerate traffic handling on the Security Gateway by optimizing and offloading packet processing, improving overall gateway performance.

QUESTION 4
What is the access available to connect to cli?

A. SCP
B. SSH
C. SNMP
D. FTP

Answer: B

Explanation:
SSH provides secure remote command-line access to the Gaia operating system, allowing administrators to connect to and manage the device via the CLI.

QUESTION 5
What are some of the common tasks that the SmartConsole is used for?

A. Create and manage policies, Monitor logs, Maintain licenses and contracts
B. Create and manage licenses. Monitor policies, Maintain performance
C. Manage all devices on the corporate network, including firewalls, security gateway, switches, routers and load balancers.
D. Redeploy the management server and gateways during troubleshooting

Answer: A
Explanation:
SmartConsole is used to create and manage security policies, monitor logs and events, and manage licenses and contracts within the Check Point security environment.

QUESTION 6
What is the purpose of the Security Policies menu in SmartConsole?

A. To create and manage security policies
B. To monitor security logs
C. To install policies
D. To configure system settings

Answer: A
Explanation:
The Security Policies menu in SmartConsole is used to create, edit, and manage the different security policies that control traffic inspection and enforcement across the Check Point environment.

QUESTION 7
What is the role of the Security Gateway in the Check Point environment?

A. To act as a centralized management server
B. To provide a web-based interface
C. To inspect inbound and outbound traffic
D. To manage objects and policies

Answer: C
Explanation:
The Security Gateway enforces security policies by inspecting inbound and outbound traffic, applying firewall rules, threat prevention, and other security controls in real time.

QUESTION 8
What control is available in SmartConsole GUI Main Window?

A. Objects Manager
B. Objects Explorer

C. Objects Selector
D. Objects Menu

Answer: D
Explanation:
The SmartConsole GUI Main Window includes the Objects Menu, which provides access to create, search, and manage objects used throughout security policies and configurations.

QUESTION 9
What is the correct default permission profile?

A. Super Admin
B. Super Profile
C. Super Permission
D. Super User

Answer: D
Explanation:
Super User is the default permission profile, granting full administrative rights to manage and configure all aspects of the Check Point environment.

QUESTION 10
Which authentication method is the simplest for SmartConsole admin accounts?

A. Check Point Password
B. SecurID
C. RADIUS
D. OS Password

Answer: A
Explanation:
Check Point Password authentication is the simplest method for SmartConsole administrator accounts because it is locally managed on the Security Management Server and does not require integration with external authentication services.

QUESTION 11
In addition to the ability to add New objects, the Object Explorer lets you:

A. Export one or more objects to the JSON file
B. Import one or more objects from the JSON file
C. Import/Export one or more objects from the CSV file
D. Export one or more objects to the CSV file

Answer: C
Explanation:
The Object Explorer allows administrators to import and export one or more objects using CSV files, enabling bulk object management and easier integration with external data sources.

QUESTION 12
What is the purpose of the Change Log in SmartConsole?

A. To install security policies
B. To manage user sessions
C. To keep a record of changes made to objects
D. To monitor network traffic

Answer: C
Explanation:
The Change Log in SmartConsole maintains a record of modifications made to objects and policies, providing visibility into configuration changes for tracking, auditing, and troubleshooting purposes.

QUESTION 13
What is a best practice for managing SmartConsole administrator accounts?

A. Allow unlimited concurrent sessions
B. Limit the use of Super User accounts
C. Use simple passwords
D. Assign roles based on maximum privilege

Answer: B
Explanation:
Limiting the use of Super User accounts follows the principle of least privilege, reducing security risk by ensuring that elevated permissions are granted only when necessary and used sparingly.

QUESTION 14
Which statement best describes Trusted Clients?

A. These are trusted administrators allowed to connect to the Security Management Server using SmartConsole
B. These are specific devices or IP addresses allowed to connect to the Security Management Server using SmartConsole
C. These are Security Gateways allowed to connect to the Security Management Server using SmartConsole
D. These are trusted users allowed to connect to the Security Management Server using SmartConsole

Answer: B
Explanation:
Trusted Clients are specific devices or IP addresses explicitly defined and permitted to establish a management connection to the Security Management Server using SmartConsole, adding an additional layer of access control to the management plane.
